

# More information

## About Prion

Prion is a Swedish-based technology company and an app for sharing photos, video and text with full control in private. Through the app, preschools can document the children's development and include parents in the preschool activities. Parents can follow their child's progress, activities and exercises directly in their phone. The name Prion is a merging of the English words Privacy On and stands for private communication.

## How it works

- The preschool creates a general group for all parents and a group per child
- Parents are invited to the general group and their child's
- The teachers create posts and selects which groups they should be sent to

## Other information

When there is a new post in a group all group members are notified. It is possible to leave comments and "like" posts. The app has in-built language support via Google translate, that allows recipients to translate text into any language in the app. It is possible for parents to create their own groups in the app and forward content to that group. Parents can also order physical photo books, that are automatically created based on the documentation, with doorstep delivery from the iPhone/iPad app.

## Security

Prion is a secure solution to communicate and document for preschools and parents. Data is sent encrypted (SSL) and stored within the EU behind firewalls on secure servers. The database is copied daily and the app is based on proven technologies and services. Prion does not claim ownership of the images shared through the platform. Prion's business model is to offer value-added services to users based on their own content.
